

Being and Becoming

(2004)

for guitar, sine wave, MAX/MSP,
and speaker

Lou Bunk

Program Notes

Chick: Our way of organizing the data which rushes by in gestalt style -that is, in increasingly abstract forms –speeds up experience into a dangerously topsy-turvy fast forward comedy. Our need for rapid disposal eliminates the details that bewitch, hold or delay children. Art is one rescue from this chaotic acceleration. Meter in poetry, tempo in music, form and color in painting. But we do feel that we are speeding earthward, crashing into our graves.

Socrates. And a thing is not seen because it is visible, but conversely, visible because it is seen; nor is a thing led because it is in the state of being led, or carried because it is in the state of being carried, but the converse of this... It does not become because it is becoming, but it is in a state of becoming because it becomes.

Cooper: Wait a minute! Wait a minute! [sips, sighs blissfully] This is-- excuse me--a DAMN fine cup of coffee.

Performance and Notation notes

1. Microtones are notated as follows:

↓ 1/4 sharp † 3/4 sharp
↘ 1/4 flat

2. The guitar is tuned as follows, going from lowest to highest string:

1- D ↘ (Below normal E)
2- F (Below normal A)
3- D
4- G
5- C ↘ (below normal B)
6- E

3. The guitar is notated an octave below the sounding pitch. This includes the resulting pitches of the retuned “E”, “A”, and “B” string.

4. The cue staff indicates where the 24 triggers are to occur. These cues can be triggered by the guitarist using a foot pedal, or by the sound projectionist using the spacebar. A MAX/MSP patch is used for this triggering.

5. The tablature staff is used to aid the guitarist in finding the notes on the retuned strings. Please only use the fingering given.

6. **Harmonics** are notated with diamond noteheads. They also sound an octave below their written pitch.

7. Only allow pitches to sustain when it is specifically notated. **Rests are always silent.** Please do not allow pitches to ring through a rest.

8. This is a quiet and intimate piece. PPP will be barely audible to the last row of the audience. This is the intention.

9. The **volume of the sine tone** should be balanced equally with the guitar. The idea is that the guitar and the sine tone are a duo. The placement of the single speaker should be next to the guitarist on stage, approximately 2-4 feet away at the same height as the guitar. The speaker used needs to be able to produce sounds as low as 20 Hz. Try to avoid using a subwoofer, but if this is not possible, then use the sub and place it inconspicuously.

10. The barlines DO matter.

11. The performance part is not bound. Please use the “**slide the page**” method of page turning. This is a quieter, and easier to plan, method of page turning.

12. **Half harmonics** are notated in the guitar with square noteheads. They are produced like harmonics, but over frets that do not produce clear tones. In mm.86-91 they are produced by playing a harmonic on the 11th fret. The sound will be short and metallic sounding.

13. String **snaps** are notated with an X in the stem. The first example of this is in m.117. These are produced by pulling the indicated string back and letting it snap against the fretboard, similar to a “Bartok pizz.”.

14. Three line **tremolos** are always to be performed as strict 32nd notes. Two line and one line tremolos are a gradual slowing down and speeding up of the tremolo rate. The rate of two and one line tremolos is not as strict as they are in a state of becoming faster or slower.

15. **Tremolos** should be played with the thumb nail using an alternating up-down pattern, as you would with a plectrum. Do not use two fingers to play the tremolos.

16. For the retuning which occurs during the performance of the piece, it is OK if the tuning pegs make squeaky noises, though, try to minimize this as much as possible.

17. **Sul pont.** should still have pitch, and **molto sul pont.** should be more metallic timbre than pitch.

Being and Becoming

Imitate the sound of the sine tones from m.43-63.

156

Tune down 1st string slowly up, then a little down, then up, then down... ultimately ending a few steps lower.

Square note-heads indicates that notated pitch is not what will sound. This is a result of the tune down.

Tune down 1st string until string is floppy. →

Musical score for measures 166-170. The Gtr. part features tremolos with dynamic markings *ppp*, *p*, and *mf*. The Sine part has a low-frequency oscillation with a dynamic marking of *ppp*. A dashed line indicates the tuning of the first string.

171

Musical score for measures 171-175. The Gtr. part is silent. The Sine part has a low-frequency oscillation with dynamic markings *f* and *mf*. A dashed line indicates the tuning of the first string.

176

Musical score for measures 176-180. The Gtr. part features tremolos with dynamic markings *ppp* and *p*. The Sine part has a low-frequency oscillation with a dynamic marking of *pp*. Annotations include *ord.*, *molto sul pont.*, *gradually slow rate of tremolo.*, and *gradually increase rate of tremolo.*

181

Musical score for measures 181-185. The Gtr. part features tremolos with a dynamic marking of *sim.*. The Sine part has a low-frequency oscillation with dynamic markings *pp*. A dashed line indicates the tuning of the first string.
